                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention relates to a novel method of identifying ligands to an orphan receptor protein which comprises transforming cells with DNA encoding a fusion protein of the orphan receptor with a fluorescent protein, so that the fusion protein is expressed in the cells (or cell membranes isolated from them) and contacting the cells with the potential ligand to be tested. A suitable fluorescent protein for incorporation in the fusion protein is green fluorescent protein (GFP), for example GFP-1, wild-type GFP, GFPPU or Enhanced GFP (EGFP). The method is useful for the identification of ligands binding to an orphan receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      61 NIAVADLCLLCTLPFVLHSLRDTSDTPLCQLSQSGIYLTNRYMSISLVTAIAVDRYVAVRH 120

Specifically, it comprises transformation of endocrine cell lines originating from mammalian hypothalamus and pancreatic islets, culturing the transformants and contacting with cells expressing the transformants and contacting with cells expressing the reaction can be used for selection of those calls with a response reaction can be used for selecting a transformant cell line with the appropriate target activity that is expressing the novel transformed DNA. Accordingly, the present invention describes novel cell lines that are applicable in expression cloning systems of bloactive peptide precursor genes, and in screening GPCR ligands for use as drugs including agonists antagonists and inverse agonists i.e. activators and inhibitors. Such cell lines can provide a highly sensitive and convenient GPCR ligand assay system. This polypeptide sequence is the human GPCR GPR35 D113A mutein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to a novel method for obtaining a DNA that encodes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Endocrine cell lines originated from mammalian hypothalamus and pancreatic islet, applicable in expression cloning systems of bloactive peptide precursor genes, and in screening G protein-coupled receptor ligands.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Kunitomo H;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 MNGTYNTCGSSDLTWPPAIKLGFYAYLGVLLVLGLLLNSLALWVFCCRMQQWTETRIYMT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  purinergic family of polypeptides and a G-protein coupled receptor. The invention provides GPR35A polypeptides having at least 70% identity with the present sequence, GPR35A polypeptides, combinant materials, and methods for their production. GPR35A polypeptides can be used for identifying agonists and antagonists/inhibitors, and for detecting diseases associated with inappropriate GPR35A activity or levels. GPR35A polypeptides and polymucleotides, anoists, antagonists and antibodies are used to treat infections such as bacterial, fungal, protozoan and viral infections, particularly HIV-1 and HIV-2; pain; cancer; diabetes;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Baranova AV,
```

```
The invention relates to a novel method for determining if a nucleic acid is a marker for a predetermined phenotype/cell type of interest from a biological species. The method comprises performing a global comparison of a group of expressed sequence tags (ESTS) known to be expressed in the phenotype/cell type of interest with all ESTS expressed in normal tissue to phenotype/cell type of interest with all ESTS expressed in the phenotype/cell type of interest is a marker for a predetermined phenotype or cell type of interest from a biological species, preferably care mumour The cell type of interest is an abnormal cell such as a tumour cell, and the predetermined phenotype is a stress induced phenotype such as hyperosmotic stress or high salt conditions. A method of the invention is also useful for determining the progression of colon cancer in a human, for detecting a tumour cell, and for regulating or preventing the growth of a tumour cell, and for regulating or cancer in a human, for detecting a tumour cell, and for regulating or tumour-associated markers. A polypeptide of the invention is useful so the immunogen for vaccinating an animal. The present sequence represents a tumour-associated antigen of the invention.
Determining if a nucleic acid is a marker for a phenotype/cell type of interest, by global comparison of expressed sequence tags known to be expressed in the phenotype/cell type with all ESTs expressed in normal
                                                                                                                                               Claim 29; Page 448-449; 516pp; English.

The invention relates to pharmaceutical compositions that comprise an agent that inhibits the expression or activity of a tumour-associated antigen (TAg) that is encoded by a nucleic acid. The pharmaceutical compositions and related compositions, are used for treatment of diseases associated with (abnormal) expression of TAg, specifically cancer e.g. of lung, breast, prostate, colon, stomach, pancreas, ear/nose/throat, kidney or cervix, also melanoma. Compositions containing TAg, or related nucleic acid, antibodies or host cells, are also useful for diagnosis and sequence of a human GPR35.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                145

It currently consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequencing vector: 113.04 of reads

This clone is available from RZDD;
Contact RZPD (customer.serviceerzpd.de) for further information.
Contact RZPD (customer.serviceerzpd.de) for further information.
Clone name at Harvard Institute of Proteomics
(www.hip.harvard.edu): FLHIJ1000.01X
This CDS clone is part of a collection of human full ORF clones
jointly established and verified by the Harvard Institute of
Proteomics (HIP) and RZPD.
This CDS has been cloned incl. stopcodon.
The CDS has been inserted into pDONR201 via a BP Clonase(TM)
reaction. Additional sequence has been added in front of the start
codon: att. .AAAAAA GCA GGC TCC ACC (ATG).
The stopcodon is followed by the 3' att site: GACCCAGCTTTTT. .att
The clone is validated by full sequence check.
Compared to the reference sequence NM_005301 (GI:33695096) we found
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CR541765 930 bp mRNA linear PRI 29-JUN-2004 Homo sapiens full open reading frame cDNA clone RZPDo834D0330D for gene GPR35, G protein-coupled receptor 35; complete cds, incl.

This CDS clone is a part of a collection of human full-length expression clones generated by Harvard Institute of Proteomics. This ORF clone has been cloned with normalized stop-codon. AttB recombination sites have been added to either end of the ORF and directionally cloned using the Gareway cloning system into pDONR 201. Additional sequences in the clone: 'ACC' before the 'ATG' (corresponding to ribosomal binding site and Kozak consensus sequences). Each clone is clonally isolated and full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               other sequences; artificial sequences.

New human G-protein coupled receptor (GPCR), useful for screening agonist or inverse agonist compounds for treating diseases associated with GPCR.

Example 2; Page 188-189; 201pp; English.

The present invention relates to transmembrane receptors, particularly

endogenous human G-protein coupled receptors (GPCRs), mutant (non-endogenous) versions of the GPCRs, and the polynucleotide sequences encoding them. The GPCRs are useful for screening agonist or inverse agonist compounds for treating diseases associated with GPCR. Diseases that can be treated with such compounds include allergies, hypertension reflux disease, depression, migraine, schizophrenia, ulcers, psychotic disorders, asthma, bronchospasm, anaesthesia, myocardial infarction (MI), stroke, glaucoma, prostatic hyperplasia, epilepsy, prostate cancer, anxiety, prostatic hypertrophy, rhintis, and angina.
